ALLSTATE CENTER

The Allstate Center is one of SPC's most unique. Located in south St. Petersburg, this location is home to the college's public safety programs, including training academies and grant-funded and in-service training for public safety professionals. Academic degrees are also offered through the College of Public Safety Administration.

Academic Programs

Earn certificates and degrees in specific public safety fields at our College of Public Safety Administration.

FIRE AND PUBLIC SAFETY TRAINING CENTER

To be a firefighter, you have to know what you're getting into. That's where SPC's cutting-edge Fire and Public Safety Training Center comes in. Designed to simulate real-life emergencies, the training center is one of the most advanced in the state. All of the training begins with this most critical concept: keeping firefighters safe. Our training center is state credentialed and we teach classes that are approved by the Florida State Fire College.

Who we serve

- SPC's [Firefighting Academy](#) students
- Area firefighters taking [specialized or re-certification courses](#)
- Local fire rescue and law enforcement units conducting training
- Pinellas County Hazardous Materials and Technical Rescue teams
- Students taking National Fire Academy courses
- Instructors and inspectors taking re-certification courses
- Area businesses such as insurance companies who investigate arson
- SPC students pursuing the [Fire Science Technology A.S. degree](#)
- Local high school students in public safety magnet programs

Fire Drill Tower

Built in 2004, the facility includes a seven-story fire drill tower that allows students and professionals to practice high-rise building rescue and survival techniques. Other training in this building includes:

- An elevator shaft and car to simulate passenger rescue
- A unique 300-foot "maze" that firefighters must traverse in full gear to illustrate rescue in confined spaces
- Davits on the roof for hoisting tools, equipment and personnel
- A lightning prediction unit and alert system that keeps training at the facility as safe as possible

Burn Building

The facility also houses a two-story "burn" building. Once a fire is activated in this building, instructors can safely evaluate students' performance through the windows of a thermally protected control room.

Forcible Entry and Ventilation Training

The center also has a forcible entry and ventilation building, which houses 42 different training opportunities and props. These include:

- First and second floor door and window forcible entry props
- Roof cutouts to illustrate fire ventilation and rescue
- Removable stair sections to illustrate compromised building infrastructure
- A collection of commercial and residential lock systems that firefighters will see in the field
- A "tunnel" of hanging electrical and other hazards that can hamper a firefighter's ability to move through a structure

LOCATION

SPC's Fire Training Center is located at 5005 126th Ave. N, Clearwater, FL 33760
